1616-72S

Trusses

#1616-72S

The ideal structure has a low deflection rate, assembles quickly, and ensures a safe installation. Our custom-designed 16 x 16” box truss does all three. All rigging components are stress-tested in a state-of-the-art engineering facility and certified with strict industry regulations to meet or exceed widely accepted safety factors. The high number of cross braces makes cable management easy without the need for electrical tape or knots.
