

# T32-Shift

## Projection Screens - Mobile

### #BFZ-FST/T32S

The truly revolutionary T32-SHIFT screen system leg makes it possible for JUST ONE person to easily adjust a mobile projection screen's height, without having to disassemble it first. No extra measuring is needed to ensure the frame is level, due to a clearly marked height scale. The T32-SHIFT can be combined with all mobile AV Stumpfl screen systems. To adjust the screen height, one can start at the bottom of the scale and simply move the screen up to one's preferred position. The T32-SHIFT will lock automatically. To move the frame further down, one can just use the locking mechanism for releasing the frame. It is now possible to assemble and adjust a complete mobile projection screen system in less than five minutes. Save time and money with premium quality components made in Austria.

#### Main Features

- Just ONE person needed for adjusting the screen height
- No additional measuring needed
- Clearly marked height scale
- One-inch increment adjustment possible
- Height adjustment possible in upright position
- Complete assembly and adjustment of a projection screen system in less than five minutes
- Legs do not protrude beyond the screen frame borders
- Ultra robust components for rental & staging environments
- Compatible with all mobile AV Stumpfl screen systems

#### Setup lengths

Depending on the screen frame height and the desired

set-up height:  
111? (283cm)  
90? (228cm)  
68? (173cm)  
46? (118cm)

### Transport Lock

To allow a single person to lift and move the screen, optional transport lock bolts can be attached. In this case, turn the transport lock bolt against the T32-SHIFT leg.
